

Iphone 4 Review

The New iphone 4 has so much more features than iphone 3gs. One of its biggest is the retina display. The screen of the iphone 4 has 4x as many pixels as the iphone 3gs. This makes the screen a lot sharper, and with the new ios 4 icons that have a slight shine in them it looks even better. Another thing is that the iphone 4 has a 5mp camera and 720p HD Video. But using the iphone screen, the camera quality looks the same as the 3gs but on the big computer screen, you will notice its better. Also when you use the phone you can feel that there has been a big improvement in the glass on the screen. It feels stronger. The iphone also feels stronger; this is because of its strong stainless steel sides, which are also used as the phones antennas. Overall this phone is a big improvement to the old 3gs but it still needs a faster processor and some iwork apps, otherwise it's a great phone and I would recommend getting it.
